Research Interest

My research focuses on statistical methodology and application to **causal inference** and **data fusion** to generate regulatory-grade real-world evidence. My work spans both clinical and statistical research, evaluating treatment **safety** and **effectiveness** in gastroenterology, while developing robust methods for the joint design and analysis of complex **experimental** and **observational** studies. I am especially interested in how **real-world evidence** informs **regulatory decision-making** and **oncology drug development**.

Education

University of California, San Diego <i>Ph.D. in Biomedical Informatics (Advisors: Dr. Ronghui Xu and Siddharth Singh)</i>	San Diego, CA 2023 – 2028 (Exp)
University of California, Los Angeles <i>Master of Science in Biostatistics (Advisor: Dr. Bogdan Pasaniuc)</i>	Los Angeles, CA 2021 – 2023
National Taiwan University <i>Bachelor of Science in Public Health, Biostatistics Track</i>	Taipei, Taiwan 2016 – 2020

Experience

Graduate Researcher <i>Department of Biomedical Informatics, UCSD Health</i>	Jan. 2024 – Present La Jolla, CA
- Generated real-world evidence in Gastroenterology using Optum claims datasets, enhancing treatment strategy evaluation through advanced survival analysis, multiple imputation, and propensity score methods. Collaborated with multiple clinical teams to design and conduct research studies, communicating scientific findings effectively and proactively solving problems to inform treatment safety and efficacy.	
Biostatistician Intern <i>Foundation Medicine, Inc.</i>	Jun. 2022 – Sep. 2022 Boston, MA
- Contributed to the development of statistical software tools, including R function and Shiny Apps [Demo]. - Developed new criteria using simulation for diagnostic assay precision studies, boosting statistical power by 90%. - Conducted statistical analyses (e.g., sample size, power, precision) to ensure quality assurance for new reagent design in FoundationOne Liquid CDx.	
Graduate Consultant <i>Department of Computational Medicine & Medicine Statistics, UCLA</i>	May. 2022 – Jun. 2023 Los Angeles, CA
- Performed mediation analyses and data visualizations for a three-arm randomized controlled trial. - Developed a survival data simulation pipeline to estimate how genetic architecture impacts in survival modeling and polygenic risk score stratification.	
Undergraduate Researcher <i>Biostatistics & Bioinformatics Core lab, NTU</i>	Jun. 2019 – Feb. 2020 Taipei, Taiwan
- Developed the first Asian colon cancer prognostic model using Taiwan Cancer Registry and US-based SEER data. - Provided a robust overall survival/risk prediction to facilitate clinical shared decision-making [Web].	

Honors & Awards

- J. Yang Scholarship, Department of Bioinformatics, University of California, San Diego, 2023.
- Honor Graduate, Department of Public Health, National Taiwan University, 2020.
- Elite Scholarship, Elite-Well Education Foundation, 2019.
- Dr. K. P. Chen Memorial Scholarship, Department of Public Health, National Taiwan University, 2019.
- Innovation Award, School of Pharmacy, National Taiwan University, 2018.
- Dr. Jiang Jian Memorial Scholarship, Department of Public Health, National Taiwan University, 2018.
- Best Research Poster Award, NTU Public Health Annual Research Symposium, 2018.
